TraxCatcher Rips Songs From FM Radio

As reported by RealTechNews, Time Trax Technologies has announced a device called the TraxCatcher, an MP3 player that sits on top of a FM radio docking station. It will tune into FM radio station and record songs into MP3 files.

The first model to be announced is the TraxCatcher Classic, retailing for \$159.99 USD and providing basic functionality. According to the company, future higher-end models will include HD radio support, digital inputs and outputs, USB connectivity, MP3 docking capabilities, clock-radio functionality and satellite radio receiver integration.
